DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after allowance or after an Office action under *Ex Parte Quayle*, 25 USPQ 74, 453 O.G. 213 (Comm'r Pat. 1935). Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, prosecution in this application has been reopened pursuant to 37 CFR 1.114. Applicant's submission filed on 04/18/2008 has been entered.

Priority

2. Acknowledgment is made of applicant's claim for foreign priority under 35 U.S.C. 119(a)-(d). The certified copy has been filed in parent Application No. PCT/JP04/04668, filed on 03/31/2004.

Election/Restrictions

3. Applicant's election without traverse of Group II, claims 7-12 in the reply filed on 11/14/2007 is acknowledged. However, claim 8 has been cancelled and claim 13 has been added. Finally claims 7 and 9-13 are pending.

EXAMINER'S AMENDMENT

4. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

- In specification, p. 2, line 19; "(Patent Documents 1 and 2)" has been deleted.
- In specification, p. 3, line 7; "Patent Document 3" has been deleted.

- In specification, p. 4, line 8; “Patent Document 3” has been deleted.
- In specification, p. 5, lines 12-13; “Patent Document 1” has been deleted.
- Abstract has been combined into a single paragraph.

REASONS FOR ALLOWANCE

5. The following is an examiner’s statement of reasons for allowance:

- With regard to independent claims 7 and 11, as a close reference, **Nishida et al (JP 2000-048459)** discloses a drive unit driving mechanism having a drive unit for playing back disks, a drive base for supporting the drive unit, and drive base movement means that allows the drive base to move into a space that is produced through division of a disk holder that is capable of storing a plurality of disks, comprising: an elastic member that elastically supports the drive unit on the drive base; and a floating lock mechanism that is driven by the drive base movement means and switches between a floating state where the drive unit is supported by only the elastic member and a locked state where the drive unit is fixed to the drive base, wherein the drive unit is provided with a turntable where a disk to be played back is mounted; and a single drive source that allows the serial operation of the drive base movement means and the floating lock mechanism is provided; **but fails to show** a disk clamping mechanism that is driven by the drive base movement means and which sandwiches the disk to be played back between the disk clamping mechanism and the turntable; and the single drive source also allows the operation of the disk clamp mechanism. And **Otsuki (US 6,947,357)** discloses a drive unit driving mechanism having a drive unit for playing back disks, a drive base for supporting the drive unit, and drive base movement means that allows the drive base to move into a space that is produced through division of a disk holder that is capable of storing a plurality of disks, comprising: a drive unit is provided with a turntable where a disk to be played back is mounted and a disk clamping mechanism that is driven by the drive base movement means and which

sandwiches the disk to be played back between the disk clamping mechanism and the turntable; and a single drive source that allows the serial operation of the drive base movement means and the disk clamp mechanism is provided; **but fails to show** an elastic member that elastically supports the drive unit on the drive base; and a floating lock mechanism that is driven by the drive base movement means and switches between a floating state where the drive unit is supported by only the elastic member and a locked state where the drive unit is fixed to the drive base, and the single drive source also allows the operation of the floating lock mechanism. **Furthermore, none of the references cited in IDS filed on 04/18/2008 recites** the feature of “drive base movement means that allows the drive base to move into a space that is produced through division of a disk holder that is capable of storing **a plurality of disks**,” as cited in claims.

- Applicant asserts; “An object of the present invention is to provide a disk drive and drive unit driving mechanism that are simple and small and which allow each part to operate smoothly” (Specification, p. 6).

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”
